- Security via sign-in and item check-out restrictions
- Automates min/max inventory level notification
- Provides comprehensive calibration tracking
- Controls multiple inventory locations, cribs
- 'Kitting' expedites checkout of item groups
- Tracks manufacturing parts and drawings
- Provides real-time inventory control
- Supports portable data collection
- Reports repair history and cost
- Prints and scans barcodes
- Provides rigging tracking
- Automates purchasing
- Displays item images

ATICTS provides critical information in areas where tracking and reporting are essential

The Automated Tool Inventory Control and Tracking System, ATICTS, is the most well-developed and comprehensive tool and item tracking system in existence. ATICTS has been deemed superior in every comprehensive evaluation since 1983. ATICTS is unmatched when the ultimate level of tracking is required:

U.S. Military: ATICTS is the approved standard Tool Inventory Management Application for the Army, Navy, Air Force and Marine Corps. ATICTS is offered to the government via our GSA schedule.
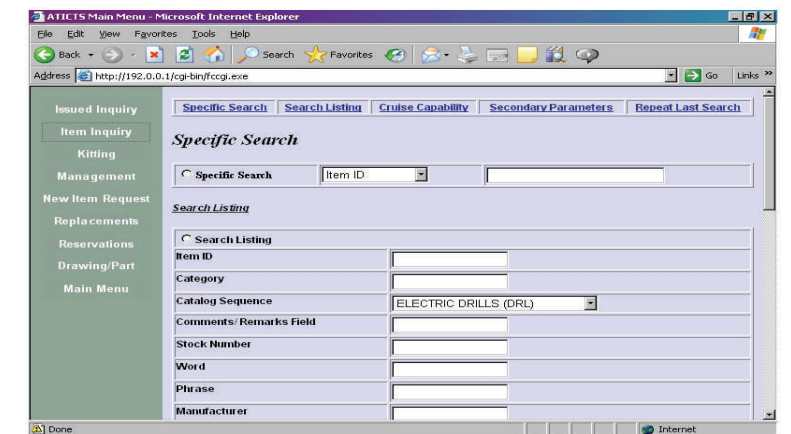

Nuclear Power Generation: ATICTS is tracking tools, weld wire, and measuring and test equipment at numerous nuclear generating stations throughout the United States.

Manufacturing and Aerospace: ATICTS is tracking manufacturing tools and specialized tooling for major corporations throughout the world including Northrop Grumman, General Dynamics, and Dresser Industries

Aircraft Maintenance: Tools and items can easily become a source of Foreign Object Damage (FOD) if lost or left behind. ATICTS helps prevent FOD, and tracks the all-important tooling used to maintain aircraft at Delta Airlines.

If it's mission-critical, it needs ATICTS!

Web Enablement is now available for ATICTS! Gain easy access for system users, administrators and management — simply browse through ATICTS

ATICTS is a Microsoft Windows™ application

- Client Operating System: Windows
- Server Operating System: Windows or Unix (Linux/AIX)
